Evening Brief

Date: Tuesday July 24 , 2018

Weather Summary

Some showers and thunderstorms will redevelop across the southern half Great Basin each afternoon through the rest of the week, but will become increasingly isolated in coverage and confined further south each day.

Hot, dry, and breezy conditions will continue across the northern half of the Great Basin through the end of the week. Strongest winds will be in ID into Western WY, gusting in the 15 to 25 mph range. Even Central and Southern areas of the Great Basin, that avoid the isolated clouds and showers could get very hot and dry during the afternoon hours, with holdovers popping up from recent lightning in timbered areas.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

| | | |
|-------------|---|---|
| Great Basin | 3 | Moderate-Heavy Initial Attack Activity |
| National | 4 | New Fires and Acres: 42 fires for 2,032.2 acres; 70 acres large fire growth |

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been issued for [Nevada](#)

Fire Potential

Sagebrush live fuel moisture values are near to below normal across Utah, Southern Nevada and the AZ Strip however have flattened out or begun to increase due to the recent persistent moisture. Elsewhere across the geographic area the sagebrush live fuel moisture values are closer to normal or even above normal for mid-July, but have peaked and are on the downward trend rapidly due to recent hot/dry weather.

Fire danger values continue to drop over much of Nevada, Utah, and the AZ Strip, with most areas below the 50th percentile to the 70th percentile. Continued higher humidity and scattered wetting rains the next few days will minimize any ignitions from growing rapidly....but northern Nevada and Utah will begin drying rapidly this week. Idaho continues to rapidly dry, with ERC's in the 80th-90th percentiles now in many areas. Increased initial attack from recent lightning in southern ID is possible today.

The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread after just a few dry days. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture now below critical levels across parts of northern NV into Idaho and contributing to fire spread.

Resources:

Aviation within the Great Basin

- o 1 VLAT, 3 LATs, 2 CL-415
- o 21 SEATs, 2 Fire Bosses
- o 11 Type 1 Helicopters / 10 Committed
- o 10 Type 2 Helicopters / 6 Committed
- o 22 Type 3 Helicopters

Crews Committed within the Great Basin

- o 14 IHCs Committed / 0 Available
- o 29 T-2 IAs Committed / 7 Available
